

HarmonyCode â Context

Creators across Africa already ship culture globally. HarmonyCode adds durable technical skill â software craft, security hygiene, responsible AI â without erasing local sound, language, and community.

Delivery: on-site cohort hubs, hybrid access for continuity, and licensed partners under facilitator standards.

Ethics: consent-forward data, disclosed AI assistance, rights-respecting sampling, staging-only security drills by default, and inclusion for documentation-light and variable-connectivity learners.
